Portfolio: gaikwadapurva.github.io

PROFILE SUMMARY

Senior Software Engineer with 8+ years of experience designing and building scalable software systems and full-stack applications across geospatial, fintech, and ad-tech platforms. Strong background in Java backend development, modern frontend engineering, system design, and enterprise application modernization, with end-to-end ownership of complex projects from technical design through production delivery. Delivered measurable impact through system optimization and modernization of legacy applications.

TECHNICAL SKILLS

Core: Data Structures & Algorithms, System Design, Performance Optimization

Languages: Java, JavaScript, TypeScript, Apex

Frameworks & Libraries: Spring Boot, Hibernate, React, Angular

Architecture: Microservices, Distributed Systems, REST APIs

Cloud & Platforms: AWS, Salesforce

Databases: MySQL, MongoDB

AI-Assisted Development: GitHub Copilot, ChatGPT

Developer Tools & DevOps: Git, GitHub, Maven, Jenkins, CI/CD

WORK EXPERIENCE

Here Technologies | Mumbai, Maharashtra, India

Feb, 2024 – Present

Software Engineer II – Full Stack

- Designed, developed, and maintained scalable backend services for large-scale geospatial data processing systems using Java, supporting high-volume production pipelines.
- Architected distributed data processing workflows to improve throughput, reliability, and fault tolerance across large-scale production systems.
- Owned the end-to-end modernization of HERE's Enterprise Geographic Information System (EGIS), a centralized geospatial asset management platform, from GWT to React & TypeScript, defining the migration architecture and reducing infrastructure and maintenance costs by 50% while improving maintainability, developer productivity, and long-term scalability.
- Architected and owned the frontend of the Mapillary Dashboard, an internal geospatial imagery management platform, using React and TypeScript to enable HERE teams to monitor crowdsourced street-level imagery and manage image collection campaigns.
- Investigated and resolved production issues across AWS production environments using log analysis, service debugging, and root cause analysis while supporting EC2, ECS, S3, Lambda, ELB, and AMI-based deployments.

Software Engineer – Java

- Developed full-stack digital banking applications for Terafina (client) using Salesforce, Apex, and Angular, supporting digital account-opening workflows across multiple banking account types for U.S. financial institutions.
- Optimized backend services and database interactions to improve application response times, system efficiency, and production performance.
- Investigated and resolved production issues through performance monitoring, log analysis, and service-level debugging while collaborating across engineering, QA, and business teams.

Itiviti (Broadridge) | Mumbai, Maharashtra, India**Jul, 2021 – Dec, 2021****Software Engineer – Full Stack**

- Developed and enhanced enterprise-grade trading and financial software solutions using Java and Angular for Goldman Sachs (client).
- Collaborated with cross-functional engineering teams to deliver scalable, high-performance features aligned with client requirements and production standards.
- Contributed to production debugging, performance optimization, and code quality improvements within a high-performance financial systems environment.

Media.net | Mumbai, Maharashtra, India**Aug, 2018 – Jun, 2021****Software Engineer – Product Engineering**

- Contributed to large-scale ad-tech applications powering real-time bidding (RTB) and content monetization systems in high-traffic serving environments.
- Engineered and optimized real-time serving workflows, improving system reliability and revenue performance through controlled experimentation.
- Performed large-scale data analysis using MySQL and Hive to drive infrastructure and revenue optimizations.
- Supported distributed DSP, SSP, and RTB integrations while resolving production incidents in real-time environments.
- Automated reporting and operational workflows, improving system efficiency and reducing operational overhead.

EDUCATION**Bachelor of Engineering (B.E.) in Computer Engineering****2014 – 2018****University of Mumbai | Mumbai, Maharashtra, India**

CERTIFICATION**Codechef Certification in Data Structures & Algorithms (Foundation Level)****Credential: <https://www.codechef.com/certificates/public/eb2b13c>**

Validated proficiency in core data structures, algorithms, time/space complexity analysis and problem-solving through structured coding assessments.
